

WARNING

XYLITOL

(Can Kill Dogs)

Hi, my name is Emma Cate, and this is my puppy, Ladybug. I got her on my 10th Birthday. I was so happy. She was an amazing puppy.

Two months after I got her, somehow she found gum that had XYLITOL in it. We never knew XYLITOL would do any harm to Ladybug. At 4:00 a.m. we heard her cry loudly. We took her to the Emergency Veterinary clinic. Ladybug had a seizure and her liver wasn't working. She was trying so hard to breath and keep her heart beating. She was in a lot of pain. That night, at midnight, we got a call from the emergency clinic veterinarians telling us that Ladybug's heart had stopped, and she had stopped breathing. She passed away, and we were so sad. She was the best dog ever.

Please keep her in your prayers, and keep your pets safe and healthy by keeping them away from any foods that have XYLITOL in them, like some sugar free gums, mints and sugar free cookies. Their life is at stake.

**DON'T BUY ANYTHING WITH XYLITOL
BECAUSE A TINY LITTLE BIT CAN KILL A
HEALTHY DOG!**
